Managers delay STS-92 launch

At Kennedy Space Center, Fla., NASA managers decided to delay the launch of STS-92 until Monday to allow workers to access Discovery's aft compartment to troubleshoot and replace a pogo suppression valve on the liquid oxygen side of the orbiter's main propulsion system. Meanwhile, engineering evaluation of the orbiter/external tank bolt protrusion issue will continue. Discovery is now scheduled to launch no earlier than 7:05 p.m. CDT Monday.
